Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,2,3,5,6,7,10,11,12,19 are rejected under 35 U.S.C. 102(b) as being anticipated by Katims '863.

Katims is considered to teach all of the structure of the above claims. The controller is considered to be the waveform generating circuitry shown in figure 5, and the plurality of electrodes 15 are shown in figure 1, connected to a headset. The phrase 'adapted to deliver..' in claim 1, regarding the electrodes, is considered to be intended use without structural limitations being positively claimed. Further, the sinusoidal nature of some of the waveforms produced by the Katims device is inherently biphasic. Figure 10 shows an astable multivibrator 77 including an operational amplifier. Figure 5 shows, among other things, primary and secondary parts of a step-up transformer 45. Also, although line 1 of the claims states 'an appetite suppression device', there is no structure claimed that specifically limits the invention to an appetite suppression device.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

Art Unit: 3762

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 4,8,13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Katims '863.

To make the headset adjustable in size, as called for in claim 4, would have been obvious since such would then accommodate a greater number of people.

SG Further, the circuitry called for in claims 8,13, ~~14,15~~ are considered to be obvious over the teachings of Katims. The Katims device has the ability to detect signals in response to applied stimulation, and can use a number of different waveform generators, and thus a number of different astable multivibrators.

Allowable Subject Matter

5. Claims 9,14-18,20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tanaka, Capel, and Salo et al all teach various aspects of applicant's invention.
